CRITICAL
CARE
CLINICS

Index

Note: Page numbers of article titles are in **boldface** type.

A

Abdomen

- damage control surgery for
 procedure for, 107–109

Abdominal compartment syndrome

- damage control surgery and, 114–115

Abdominal injuries

- blunt trauma and, 119
- critical concepts in, **119–134**
- diagnosis of, 120–123
 - CT in, 122–123
 - diagnostic peritoneal lavage in, 122
 - FAST in, 121
 - laparoscopy in, 123
 - local wound exploration in,
 120–121
 - physical examination in, 120
 - radiography in, 121
- management of
 - complications in, 130
- mechanism of injury in, 119–120
- of diaphragm, 123–124
- of duodenum, 127–128
- of hollow viscus, 128–129
- of liver and spleen, 124–126
- of pancreas, 126–127
- penetrating trauma, 119–120

Acidosis

- damage control surgery for, 104
- procedure for, 112–113
- metabolic
 - nutritional support of critically ill
 and injured patients and, 150

Acute renal failure (ARF)

- rhabdomyolysis and
 management of, 180

Acute respiratory distress syndrome (ARDS)

- causes of, 84–85
- characteristics of, 83

described, 83

management of, **83–99**

- outcome after, 97
- protocolized approach to, 94–97
- ventilator management in, 91–94
- pathophysiology of, 85–87
- ventilator-induced lung injury and,
 87–89

Amino acids

- in critically ill and injured patients, 142

Angiography

- radionuclide
 in blunt cardiac injury, 65

ARDS. *See Acute respiratory distress
 syndrome (ARDS).*

ARF. *See Acute renal failure (ARF).*

Arginine

- in critically ill and injured patients, 144

Azotemia

- nutritional support of critically ill and
 injured patients and, 149

B

Blunt cardiac injury, **57–70**

- assessment of, 60–65
 - cardiac enzymes in, 63–64
 - ECG in, 60–63
 - echocardiography in, 64–65
 - radionuclide angiography in, 65
- cardiac function after
 - long-term, 66–67
- diagnosis of, 59–60
- incidence of, 57
- management of, 66
- mechanism of, 57–58

- natural history of, 57–58
 pattern of, 58
- Blunt trauma**
 abdominal injuries due to, 119
 thoracic, **71–81**. *See also* specific type
 and *Thoracic trauma, blunt*.
- Brain injuries**
 management of, **25–41**
 alternative methods in, 38–40
 ICU, 33–38
 monitoring in, 40–41
 post-ICP, 34–37
 preintensive care unit, 33–34
 resuscitation in, 26–33
 airway management, 26–27
 algorithms in, 29–33
 disability and, 29
 fluid resuscitation, 27–28
 second tier therapy in, 37–38
 targeted therapy in, 41
 secondary insults, 25–26
- Burn injuries**
 nutritional support for, 151
-
- C**
- Caloric/energy requirements**
 in critically ill and injured patients, 141
- Cardiac enzymes**
 in blunt cardiac injury, 63–64
- Cardiac injuries**
 blunt, **57–70**. *See also Blunt
 cardiac injury*.
- Central line complications**
 nutritional support of critically ill and
 injured patients and, 151
- Chest**
 damage control surgery for
 procedure for, 109–111
- Coagulation defects**
 in trauma patients, **13–24**
 causes of, 13–15
 dilution and, 13–14
 hypothermia and, 14
 recognition of, 16–17
 testing in, 16–17
 trauma and, 15
 treatment of, 17–21
 adjunctive, 19–21
 before procedures in, 21
 transfusions in, 17–19
 underlying disease and, 15
- Coagulopathy(ies)**
 damage control surgery for
 procedure for, 113
 damage control surgery in, 104
- Compartment syndrome**
 rhabdomyolysis and
 management of, 181–182
- Computed tomography (CT)**
 in abdominal injuries, 122–123
- Contusion(s)**
 pulmonary
 thoracic trauma and, 77–78
- Crush injury**
 mass casualties, 186–187
 rhabdomyolysis due to, **171–192**. *See
 also Rhabdomyolysis, crush
 injuries and*.
- Crush syndrome**, 174–176
-
- D**
- Damage control surgery, 101–118**
 abdomen-related
 procedure for, 109
 abdominal compartment syndrome due
 to, 114–115
 acidosis-related, 104
 chest-related
 procedure for, 109–111
 coagulopathy-related, 104–106
 complications of, 114
 historical perspective on, 101–102
 hypothermia-related, 103–104
 procedure for, 106–113
 for acidosis, 112–113
 for coagulopathy, 113
 for hypothermia, 111–112
 initial management, 106–107
 resuscitation in, 111–113
 results of, 114–115
- Diagnostic peritoneal lavage**
 in abdominal injuries, 122
- Diaphragm**
 injuries of, 123–124
- Dilution**
 coagulation defects in trauma patients
 due to, 13–14
- Disability(ies)**
 brain injuries and
 management of
 resuscitation in, 29
- Duodenum**
 injuries of, 127–128

E

ECG. *See Electrocardiography (ECG).*

Echocardiography
in blunt cardiac injury, 64–65

Elderly
trauma in
initial management of, 7–8

Electrocardiography (ECG)
in blunt cardiac injury, 60–63

Electrolyte requirements
in critically ill and injured patients,
142–143

Enzyme(s)
cardiac
in blunt cardiac injury, 63–64

F

FAST. *See Focused assessment with sonography for trauma (FAST).*

Fat emboli syndrome
femoral fractures and
in multiply injured patient, 161

Fat overload syndrome
nutritional support of critically ill and
injured patients and, 149

Femoral fractures
in multiply injured patient
evaluation of, 157–158
fat emboli syndrome and, 161
fracture fixation for
timing of, 159
head injuries associated with,
159–161
initial management of, **157–169**

Fick equation, 140

Flail chest
thoracic trauma and, 74–76

Focused assessment with sonography for
trauma (FAST)
in abdominal injuries, 121

Fracture(s)
femoral
in multiply injured patient
initial management of,
157–169
in multiply injured patients
initial management of.
See also Femoral fractures, in multiply injured patient.

pelvic
in multiply injured patient
initial management of. *See also Pelvic fractures, in multiply injured patient.*

rib
thoracic trauma and, 73–74

G

Glucose/insulin
in critically ill and injured patients, 142

Glutamine
in critically ill and injured patients, 144

H

Head injuries
femoral fractures and
in multiply injured patient,
159–161
nutritional support for, 151

Hepatic steatosis
nutritional support of critically ill and
injured patients and, 150

Hollow viscus
injuries of, 128–129

Hypercapnia
nutritional support of critically ill and
injured patients and, 150

Hypertriglyceridemia
nutritional support of critically ill and
injured patients and, 149–150

Hypothermia
coagulation defects in trauma patients
due to, 14
damage control surgery for, 103–104
procedure for, 111–112

I

ICU. *See also Intensive care unit (ICU).*

Immunocompetence
in critically ill and injured patients, 138

Immunonutrition
in critically ill and injured patients,
144–146

Intensive care unit (ICU)
brain injury management in, 33–38. *See also Brain injuries, management of.*

L

Laparoscopy
in abdominal injuries, 123

- Linoleic acid
in critically ill and injured patients, 144
- Liver
injuries of, 124–126
- Lung injuries
ventilator-induced, 87–89

M

- Mannitol
for crush injuries, 179
for rhabdomyolysis, 179
- Metabolic acidosis
nutritional support of critically ill and injured patients and, 150
- Metabolic requirements
in critically ill and injured patients, 139–140
- Multiply injured patients
femoral fractures in
initial management of, **157–169**.
See also Femoral fractures, in multiply injured patient.
pelvic ring injuries in, 161–165. *See also Pelvic ring injuries, in multiply injured patient.*

N

- Nucleotide(s)
in critically ill and injured patients, 144–146
- Nutritional support
of critically ill and injured patients, **135–156**
amino acids, 142
assessment in, 135–137
burn injuries, 151
caloric and nitrogen balance studies, 138
caloric/energy requirements, 141
complications of, 149–151
electrolyte requirements, 142–143
feeding access in, 148–149
Fick equation, 140
glucose/insulin, 142
head injuries, 151
immunocompetence in, 138
immunonutrition, 144–146
metabolic requirements, 139–140
metabolic responses to, 143
obese patients, 151
patient population for, 140–141
protein requirements, 141–142
route of administration for, 147–148
serum albumin, 137–138

- timing of, 146–147
trace elements, 143

O

- Obese patients
critically ill and injured
nutritional support for, 151
- Overfeeding
nutritional support of critically ill and injured patients and, 149

P

- Pancreas
injuries of, 126–127
- Pelvic ring injuries
in multiply injured patient, 161–165
classification of, 163
described, 161–162
evaluation of, 162–163
management of, 164–165
urologic injuries associated with, 163–164
- Penetrating trauma
abdominal injuries due to, 119–120
- Peritoneal lavage
diagnostic
in abdominal injuries, 122
- Posttraumatic respiratory failure
management of, **83–99**. *See also Acute respiratory distress syndrome (ARDS), management of.*
- Protein requirements
in critically ill and injured patients, 141–142
- Pulmonary contusion
thoracic trauma and, 77–78

R

- Radiography
in abdominal injuries, 121
in initial management of trauma patients, 6
- Radionuclide angiography
in blunt cardiac injury, 65
- Refeeding syndrome
nutritional support of critically ill and injured patients and, 150
- Renal failure
acute
rhabdomyolysis and
management of, 180

- rhabdomyolysis and
 - risk factors for, 182–185
- Renal injuries
 - rhabdomyolysis and
 - pathophysiology of, 176–178
- Resuscitation
 - fluid
 - for traumatic brain injury, 27–28
 - for traumatic brain injury, 26–33. *See also Brain injuries, management of, resuscitation in.*
- Rhabdomyolysis
 - compartment syndrome and
 - management of, 181–182
 - crush injuries and, **171–192**
 - acute renal failure due to
 - management of, 180
 - causes of, 172–173
 - diagnosis of, 178
 - management of, 178–186
 - algorithm in, 185, 186
 - mannitol in, 179
 - mass casualties, 186–187
 - pathogenesis of, 173–174
 - prevalence of, 171
 - renal failure due to
 - risk factors for, 182–185
 - renal injury associated with
 - pathophysiology of, 176–178
 - Rib fractures
 - thoracic trauma and, 73–74

S

- Serum albumin
 - in critically ill and injured patients, 137–138
- Spinal cord trauma
 - management of, **41–51**. *See also Spine injuries, management of.*
- Spine injuries
 - management of, **41–51**
 - airway management in, 45–47
 - circulation in, 47
 - clearing spine in, 43–45
 - deep vein thrombosis/pulmonary embolism in, 50–51
 - general care in, 50–51
 - pulmonary care in, 50
 - skin care in, 50
 - steroids in, 49
 - surgical
 - timing of, 47–49
 - urinary system in, 51

- Spleen
 - injuries of, 124–126
- Steatosis
 - hepatic
 - nutritional support of critically ill and injured patients and, 150
- Steroid(s)
 - in spine injury management, 49

T

- Thoracic trauma
 - blunt, **71–81**. *See also* specific trauma, e.g., *Flail chest*.
 - flail chest, 74–76
 - mechanism of injury in, 71–73
 - outcome of, 78–79
 - pulmonary contusion, 77–78
 - rib fractures, 73–74
- Trace elements
 - in critically ill and injured patients, 143
- Transfusion(s)
 - for coagulation defects in trauma patients, 17–19
 - complications of, 19
- Trauma
 - blunt
 - abdominal injuries due to, 119
 - coagulation defects due to, 15
 - penetrating
 - abdominal injuries due to, 119–120
 - prevalence of, 1
- Trauma patients
 - coagulation defects in, **13–24**. *See also Coagulation defects, in trauma patients.*
 - geriatric
 - initial management of, 7–8
 - initial management of, **1–11**
 - prehospital care, 2–3
 - primary survey in, 3–6
 - radiographs in, 6
 - secondary survey in, 7
 - tertiary survey in, 8–9

U

- Urologic injuries
 - pelvic ring injuries and
 - in multiply injured patient, 163–164

V

- Ventilator(s)
 - lung injury due to, 87–89
